

MANGESH GOSAVI

Full Stack Developer | MERN Stack Developer | Software Developer
8879577847 | mangeshgosavi32@gmail.com | myportfolio-black-theta.vercel.app

PROFESSIONAL SUMMARY

Results-oriented Developer with 9 months of professional experience building scalable, multi-tenant web applications using the MEAN Stack (MongoDB, Express.js, Angular, Node.js), React.js, and TypeScript. Experienced in full-stack development across frontend, backend, REST API design, RBAC-based authentication (Keycloak, JWT, OTP), and VM-based production deployments using PM2. Proven ability to deliver end-to-end features across complex platforms, resolve production bugs, and contribute to data migration pipelines all within Agile, cross-functional team environments. Seeking Full Stack Developer, Software Developer or MERN Stack Developer roles to drive high-quality, performance software solutions.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3
Frontend: React.js, Angular, Tailwind CSS, Bootstrap, Responsive Design
Backend: Node.js, Express.js, Django, Flask, REST API Development, MVC Architecture
Databases: MongoDB, MySQL, SQL, Database Schema Design, Data Migration
Authentication: Keycloak SSO, JWT, OTP Verification, RBAC, Role-based Auth Guards
Dev Tools: Git, Postman, Figma, PM2
Libraries: Pandas, Matplotlib, NumPy, PDF Generation
Methodologies: Agile, Full Stack Development, MERN Stack, MEAN Stack, Production Support, Performance Optimization

WORK EXPERIENCE

Junior Software Developer | Mumbai, India (Full-Time) | Oct 2025 – Mar 2026

Unified Platform & Multi-Tenant Architecture

- Designed and delivered a multi-tenant, RBAC-enabled Unified Platform serving Student, Admin, and Super Admin portals, implementing secure role-based Auth Guards and Keycloak SSO-based authentication to ensure zero unauthorized access across all tenant environments.
- Designed and developed an Agent Registration module enabling agents to register students, manage applications, and track real-time payment status through dedicated dashboards — extending the Admin panel with a dedicated Agent view.
- Built a dynamic onboarding configuration system supporting service-level logo management, authority detail configuration, delivery type setup, and payment gateway integration with full-stack validation (frontend + backend).

Full Stack Feature Development

- Implemented dynamic form rendering with sequence-based field ordering, conditional visibility by document/delivery type, and real-time tab unlock logic triggered by education completion status — improving form UX and data integrity.
- Developed a PDF and Excel generation engine supporting multiple document types — Transcripts, ID Cards, Result Books, Registration Sheets, and Aveshanbook reports — reducing manual document preparation effort.
- Integrated end-to-end OTP verification flow and user verification status logic to block unauthorized access at both frontend (UI guards) and backend (API middleware) levels, enhancing platform security.
- Built an errata re-upload workflow with document-level upload/delete controls, confirmation modals, and status tracking for TC, Migration, and PDC services; added backend logic to enforce mandatory field completion before form submission.
- Enhanced responsive design and UI consistency across Student and Admin portals using Angular and Tailwind CSS, improving usability across device types.

Cross-Client Bug Fixes & Production Deployments

- Resolved critical production bugs across HSNC, Xavier, Raheja, and Unified platforms — including PDF alignment failures, marks pattern validation errors, pagination defects, marksheet rendering issues, and dropdown/search malfunctions — directly improving platform stability.
- Led end-to-end VM deployments for Raheja and Xavier environments from scratch using PM2 process manager — managing file system backups, project migration, environment configuration, and live production monitoring.

Data Migration & Performance Optimization

- Engineered a user-wise, tenant-wise data migration pipeline resolving ID continuity gaps, creating missing Keycloak user accounts, and syncing education records and documents to the target database — ensuring zero data loss.
- Implemented dynamic, route-specific loaders (Library, Certificate, Puzzle, Cloud Sync, University themes) to improve perceived performance and UX consistency across all platform modules.

Junior Software Developer Intern | Mumbai, India (Internship) | Jan 2025 – Mar 2025

Dashboard & Test Scheduling

- Designed and developed a full Student Dashboard covering Student Reports, Result Charts, Bookmarked Questions, Reports, Scheduled Tests, and a Test Paper module — delivering a complete self-service learning experience.
- Built a Test Scheduling section enabling admins to assign tests to students with configurable settings, integrated with backend REST APIs for test lifecycle management.

Test Paper Module & Automation

- Implemented auto-pause timer logic for offline/disconnected users and cheat detection via tab-switch monitoring, improving test integrity and reliability.
- Developed shuffled question delivery per student with support for both image-based and text-based questions; integrated pie chart interaction allowing drill-down to solution view on click.
- Automated test status transitions (active → completed) using scheduled backend logic; organized bookmarked questions chapter-wise in the reporting module for structured review.

PROJECTS

Test Series Website — *React.js, Node.js, Express.js, MySQL, Python, Django* | Live

- Built a full-stack MERN-style test series platform with React.js frontend and Django/Node.js backend, featuring user authentication (JWT), test creation, question management, and result tracking.
- Developed RESTful APIs for test scheduling, submission handling, and result computation; integrated MySQL database with normalized schema for users, tests, and question banks.
- Implemented responsive design using CSS/Bootstrap and deployed the application to a live environment.

Shopping Website — *React.js, Node.js, Express.js, MySQL, Python* | Live

- Developed a full-stack e-commerce web application using the MERN-style stack with Node.js/Express.js backend and React.js frontend, supporting product listings, cart management, and order workflows.
- Designed and integrated REST APIs for product CRUD, user authentication (JWT), and order processing; used MySQL for relational data storage with structured schema design.
- Implemented state management on the frontend for cart and session handling, with responsive UI across device breakpoints.

Freedom – Blog Website — *React.js, Node.js, Express.js, MongoDB, Tailwind CSS* | Live

- Built a full-stack MERN blogging platform with user authentication, post creation/editing, and comment functionality using MongoDB for document storage and Express.js REST APIs.
- Implemented JWT-based authentication, role-based content access, and a Tailwind CSS responsive UI optimized for mobile and desktop.
- Deployed the application live with environment-based configuration and Git-based version control.

Blockchain Supply Chain — *Python, Flask, HTML, CSS*

- Developed a supply chain transparency application using Python/Flask backend with blockchain data integrity concepts, enabling end-to-end product tracking via REST API endpoints.

TrendsTweet – Web Scraping Automation — *Python*

- Built a Python automation tool to scrape and aggregate trending tweet data, applying Pandas for data transformation and Matplotlib for visualization and reporting.

Auction Platform — *JavaScript, HTML, Tailwind CSS*

- Designed and developed a frontend auction platform UI with real-time bid display logic, responsive layout using Tailwind CSS, and JavaScript-driven state management for bidding interactions.

EDUCATION

Master of Information Technology — Ramnarain Ruia College | 2025 | CGPA: 7.25

Bachelor of Science (Graduation) — Patkar Varde College | 2023 | CGPA: 8.75

SSC – Maharashtra State Board — IES Charkop | 2018 | 81%

CERTIFICATIONS

- SQL – Simplilearn
- Python Libraries for Data Science (Pandas, NumPy, Matplotlib) – Simplilearn

LANGUAGES

English | Hindi | Marathi
